

## Chairpads for Roller Caster Chairs and Seam Sealer

### Chair Pads

It is the goal of Shaw Contract Group to provide you with accurate, reliable information regarding the performance characteristics associated with your Shaw Contract Group carpet on Ultraloc MP backing. Shaw Contract Group encourages the use of chair pads under chairs with roller caster wheels to ensure that you receive maximum performance from your carpeting. Without the protection of chair pads, you will run the risk of accelerated wear to the face of the carpet. Excluding the use of chair pads in your environment will not void the warranty associated with your backing on its high performance products such as Ultraloc MP will not delaminate. However, we feel we would not be advising you appropriately by not bringing this possibility to your attention.

Another consideration is the resistance to rolling traffic. A pad or attached cushion that is either too soft or too thick will increase the rolling resistance making movement over the surface difficult.

### Seam Sealer

Shaw Contract Group's Lifetime Limited Warranty cover moisture management as tested under the British Spill Test to facilitate cleaning, provided all seams are sealed in strict accordance with Shaw Contract Group installation guidelines (Shaw Contract Group 4000 Sealer for Ultraloc MP). Seam sealer acts as a barrier, and is required to inhibit moisture from penetrating in or out of the seams.

Should you have any questions, please contact your local Shaw Contract Group Specialist, or call Shaw Inforum @ 1-877-502-7429.
